<b>Our Contract with You, The Reader</b>	<b>iii</b>
<b>Acknowledgements</b>	<b>xiii</b>
<b>About the Authors</b>	<b>xv</b>
<b>How to Download the Files</b>	<b>xvii</b>
<b>Introduction</b>	<b>xix</b>
<hr/>	
<b>Chapter 1: Basic Linux Installation</b>	<b>1</b>
Basic file server functions	1
Selecting a distribution	1
Red Hat Linux	3
United Linux	3
Other Linux distributions	4
A brief guide to installing Linux	4
1. Checking hardware	5
2. Planning partitions	8
3. Understanding the Filesystem Hierarchy Standard	9
4. Selecting a filesystem format	11
5. Preparing partitions and hard drives for dual booting	15
6. Basic steps to installing Red Hat Linux	24
Conclusion	27
<hr/>	
<b>Chapter 2: Installing Linux as a File Server</b>	<b>29</b>
Basic terms	29
The installation nitty-gritty	30
Remaining steps	30
Configuring a firewall	31
Configuring communication through the firewall	32
Authentication	33
Samba authentication	34
Installing what's necessary	35
Basic components	35
Basic components plus	35
Options	35
Other network services	39
After installation	40
First Boot	40
The Red Hat Linux GUI	43
The Red Hat Network	44

Rawhide	48
Other updates	48
Package management	48
Installing and upgrading RPMs	48
Using the rpm command	50
rpm command details	51
Uninstalling what is not necessary	52
Checking installed services	53
Getting more information	55
Uninstalling a service	56
Deactivating a service	56
Conclusion	58
<b>Chapter 3: Setting Up Your Server File System</b>	<b>59</b>
<hr/>	
The Microsoft CIFS	60
Background	60
Basic look and feel	61
The NFS alternative—an overview	63
Basic administration	63
Process management	64
User categories	65
Configuring a Samba server	66
Getting Samba	66
Samba configuration files	67
Samba and firewalls	68
The Red Hat Samba Configurator	70
Samba Web Administration Tool	75
Configuring Samba in detail	84
Opening smb.conf in a GUI	85
Global settings	86
Defining shared directories and printers	94
Conclusion	102
<b>Chapter 4: Setting Up Your File Server's Users</b>	<b>105</b>
<hr/>	
Users and accounts	106
Linux user and group accounts	106
Configuring Samba users	111
Users on a Domain	114
Using the Microsoft user database	114
Setting up a Samba PDC database	118
File and directory management	121
Linux permissions	121
Default permissions	122
Linux file ownership	123
Limited support for Access Control Lists	123

Linux groups	123
Red Hat Linux's private groups	123
Creating a special group	124
Quotas	127
The boot process	127
Configuring quota configuration files	128
Configuring quotas for a user	129
Configuring quotas for a group	131
Setting a grace period	132
Activating quotas	132
Conclusion	133
<b>Chapter 5: Connecting Linux Workstations</b>	<b>135</b>
Configuring the workstation	136
Samba client packages	136
Connecting to a Domain	137
Finding shared directories	137
Mounting directories	139
Linux login batch files	143
Peer-to-peer Workgroups	147
Setting up accounts	149
A PDC and a Windows Domain member server	149
Windows PDC and Linux Domain member server	150
Linux PDC and Linux Domain member server	151
Conclusion	152
<b>Chapter 6: Connecting Windows Workstations</b>	<b>153</b>
Preparing accounts	153
Logon scripts	154
Profiles	154
Configuring the Microsoft workstation	155
Connecting a Windows 95/98/ME workstation to a Domain	156
Creating a Windows 95/98/ME Workgroup share	167
Windows NT 4 Workstation	168
Windows 2000 Professional	177
Windows XP Professional	186
Text-mode network commands	193
Troubleshooting	195
Samba syntax	195
Samba logs	196
Conclusion	197

<b>Chapter 7: Configuring Printers</b>	<b>199</b>
Packages	199
CUPS packages	200
LPD packages	201
Configuring a local printer	201
Checking services	201
Configuring a print service	202
Configuring printers with the CUPS Web-based tool	206
Network printers	211
Creating network printers	212
Sharing printers over a network	214
Connecting to network printers from workstations	215
Connecting to a Linux print server from a Windows client	215
Connecting to a Windows print server from a Windows client	221
Connecting to a Linux print server from a Linux client	222
Connecting to a Windows print server from a Linux client	224
Conclusion	227
<b>Chapter 8: Administration and Management</b>	<b>229</b>
Shells	229
Basic navigational commands	230
Basic file management commands	235
Text editing	241
Scripts for repetitive tasks	243
The cron scheduler	243
cron rotates logs	245
cron helps find files	246
A one-time job	247
Administrative tools	248
Managing the installation files	248
Managing the Linux boot process	250
The Red Hat Linux rescue mode	257
Regular user tasks	260
Conclusion	263
<b>Chapter 9: System Backup</b>	<b>265</b>
Backup strategies and types	265
Backup strategies	266
Backup types	266
RAID	267
Backup options	270
Media options	270
System backups	271

<b>Backup and Restore commands</b>	<b>272</b>
tar archives	273
cpio archives	274
Full, incremental, and differential backups	275
Recording to CDs and DVDs	276
<b>Backing up over a network</b>	<b>280</b>
Backing up from a Windows client to a Windows file server	280
Backing up from a Windows client to a Linux file server	281
Backing up from a Linux client	282
<b>Scheduled backups</b>	<b>283</b>
Creating a file server script	283
Other commands	284
<b>Conclusion</b>	<b>284</b>
<b>Appendix A: Samba 3.0 Preview</b>	<b>287</b>
<hr/>	
<b>Appendix B: Sample Samba Configuration Files</b>	<b>291</b>
